Anita Luckett – Instructional Designer

To whom it may concern:

I am delighted to share an exciting project I would consider implementing/modifying at our campus. Our vision is to provide our students with comprehensive skill sets and facilitate their successful job placement in various industries. In this letter, I would like to provide you with some examples I would like to implement in the areas of curriculum design, faculty readiness and support, student engagement and community building.

Curriculum Design and Job Placement Alignment: Our curriculum design for this project will align with the industry's dynamic demands and equip our students with the practical skills that employers seek. These courses will establish a solid foundation for our students and prepare them for job placements in various settings.

Faculty Readiness and Support: Ensuring faculty readiness and support in adopting and integrating these tools effectively is of utmost importance to us. We understand that faculty members play a pivotal role in the success of any program. I would like to design a comprehensive training program and resources to prepare our faculty members for this endeavor. Workshops, seminars, and online modules will help with guiding our faculty in the utilization of instructional technology and its integration into their teaching practices. As an instructional designer, I want to incorporate other experts to address any challenges our faculty members may encounter. By providing ongoing support and professional development opportunities. The goal is to empower our faculty members to effectively utilize instructional technology both in-person and in the online learning environment.

Promoting Student Engagement and Community Building: To promote active student engagement, we can implement various strategies such as group discussions, case studies, and hands-on projects that encourage participation and collaboration. Furthermore, we will leverage technology to create virtual communities where students can interact with their peers, faculty members, and industry professionals. These virtual communities will serve as networking, mentoring, and resource-sharing platforms, fostering a sense of connection and support throughout their educational journey.
